

Alvar

Height-adjustable desks

Active posture – throughout the day

Keeping mobile is an essential ingredient of a healthy workstyle. The Alvar desk adapts to your body's need for changes in posture as often as you want. So throughout the working day you can sit, stand, recline, lean – as often as you feel the need.

High performance

Having the benefits of height adjustment does not mean compromise when it comes to weight requirements. The Alvar desk is designed for loads of up to 80kg per leg, so its ideal for situations where multiple monitors are needed. The electrical mechanisms are hidden away so there's plenty of leg room for the user.

Managing the cables

Cable management and height adjustability pose seemingly conflicting demands. The Alvar desk has solved the problem with use of a flexible umbilical cord and concealed cable dump. This means that your cables can be neatly and safely controlled without impeding the adjustability of the worksurface.

From shortest to tallest

Alvar will suit everyone. The worktop adjusts 600-1250mm, meaning it reaches both lower and higher than the ISO standard.

Choice of leg configuration

At installation time you can choose on some models to have the legs straight or angled. The angled option allows for more room for the chair and provides increased stability – as well offering an alternative aesthetic appearance.

A choice of mechanisms

There is a choice of two convenience levels for height adjustment. The pin-adjustment option allows height adjustment from 600-900mm in 25mm increments. The electrical mechanism adjusts to any height from 600-1250mm.

Quick and quiet

The Alvar desk's electrical mechanism is quiet and unobtrusive as well as being quick. At 40mm/sec you won't wait long for a new working position.

A full range of shapes and sizes

There’s an extensive collection of different shapes and sizes for the Alvar desktops, all the finishes have been designed to co-ordinate with Herman Miller ranges.
