cantilever table · modular top

a folding table that expands from flat pack to almost any length without the use of tools, cantilever table is ideal for conferences, events and exhibitions. The base uses flexible honeycomb geometry to compress for efficient storage or easily expand to connect with the next, allowing the table to be manipulated into versatile forms for diverse usage. The bases are made from paper or a polyethylene non-woven textile, and paired with a modular tabletop made from sustainable, engineered wood.

sold in sets of 6 wedge shaped modular tops and two bases, one set makes a 94.5" (2.4m) diameter ring or can be shaped into myriad other configurations.

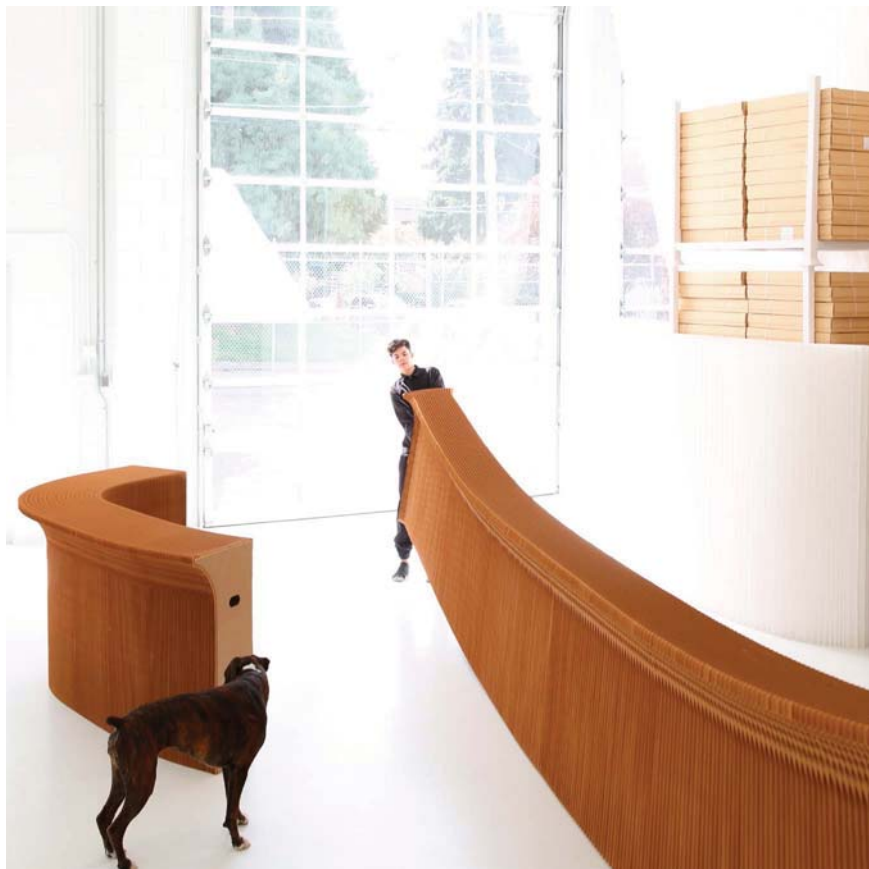

the MDF tabletops are SCS NAF (No Added Formaldehyde) and FSC-certified, with a polyurethane satin finish. The black MDF is dyed black all the way through. The natural colour MDF is Medex®, engineered for interior high moisture areas and significantly exceeds standard MDF physical properties.

Design by Stephanie Forsythe + Todd MacAllen

sold in sets of 6 modular tops with a flexible base - connect as many sets as you wish

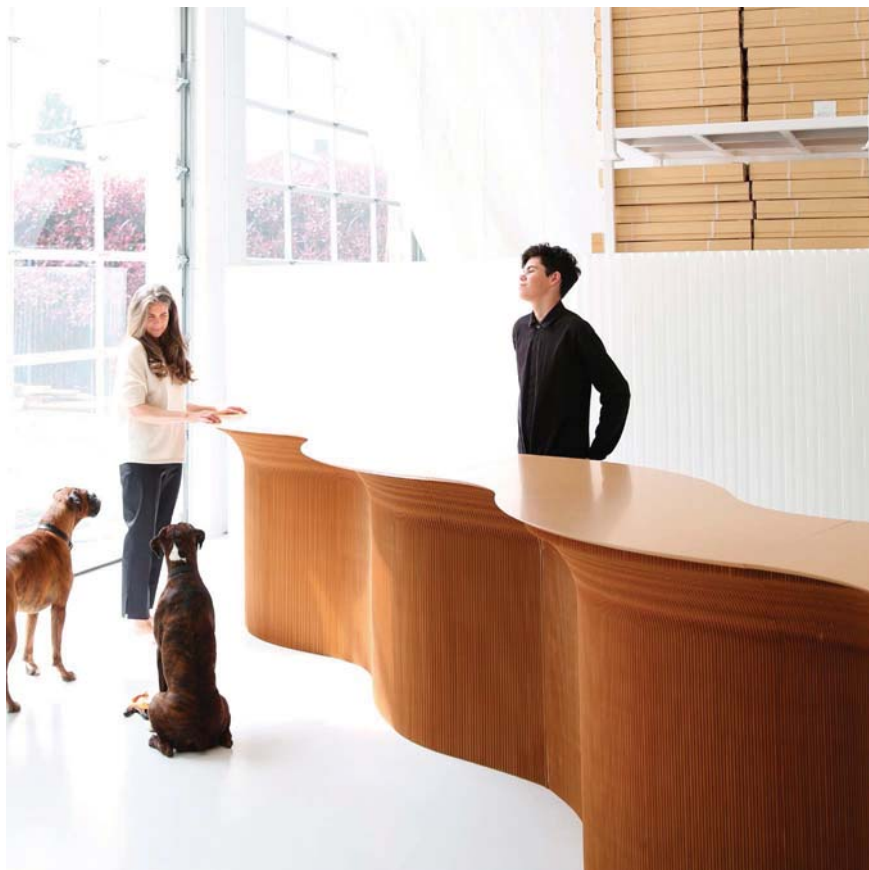

each table base is capped by end panels made with rare earth magnets. These panels connect to each other to form one circular base, or join multiple bases to create long stretches of table or bar.

honeycomb geometry matched with modular tops allows cantilever table to be arranged and rearranged into countless imaginative shapes.

a thicker, stiffer version of the water resistant polyethylene non-woven textile used in softwall, along with a smaller cell structure, gives the white cantilever table base impressive weight bearing capacity. The robust paper base supports the same weight.

the medium density fibreboard used for the modular tops is a formaldehyde-free blend of softwood and hardwood residuals bonded by heat and pressure.
