## fanning stool + bench + lounge softseating

From one softseat element you can alternately construct either a stool or bench and create longer benches by connecting multiple softseating elements by their magnetic end panels.

softseating is a collection of seating and table elements made from paper or nonwoven polyethylene textile. Elements use a flexible honeycomb structure to fan open into stools, benches and loungers. Modular magnetic end panels allow each seat to connect to itself, forming a round stool or low table, or chain elements in series to create long winding benches and unique seating topographies.

The paper is a robust blend of new and recycled fibres, which easily supports people or pets. Fire retardant and acoustically absorbent, paper softseating is available in natural brown, charcoal black and indigo blue. textile softseating is translucent white and may be illuminated from within by LED.

Although made from readily recyclable materials, softseating is not intended to be disposable or thought of for short term use. With time and use, the paper takes on a patina of crushed and softened facets that catch light in a beautiful, variegated way—the crisp honeycomb below remains strong and intact.

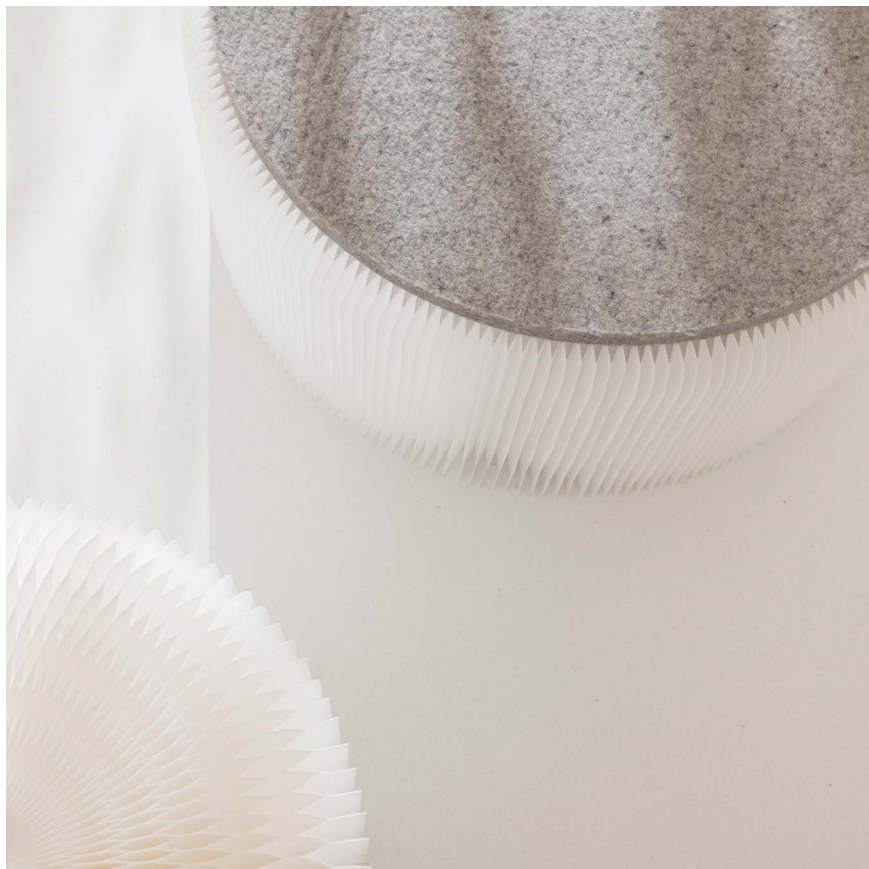

The most portable sizes of the fanning stool are available with an optional wool felt tote, for whisking the paper seats off to a museum, garden party or concert.

Design by Stephanie Forsythe + Todd MacAllen

magnetic end panels form the last layer of each fanning stool, creating a strong, natural clasp for the seats to connect to themselves or to other modular elements.

the two smallest sizes of softseating are available with a convenient felt tote, for whisking the paper seats off to a gallery, garden party or concert.

each diameter of fanning stool has a corresponding wool felt pad, which may be used as an optional cushion or soft table surface.

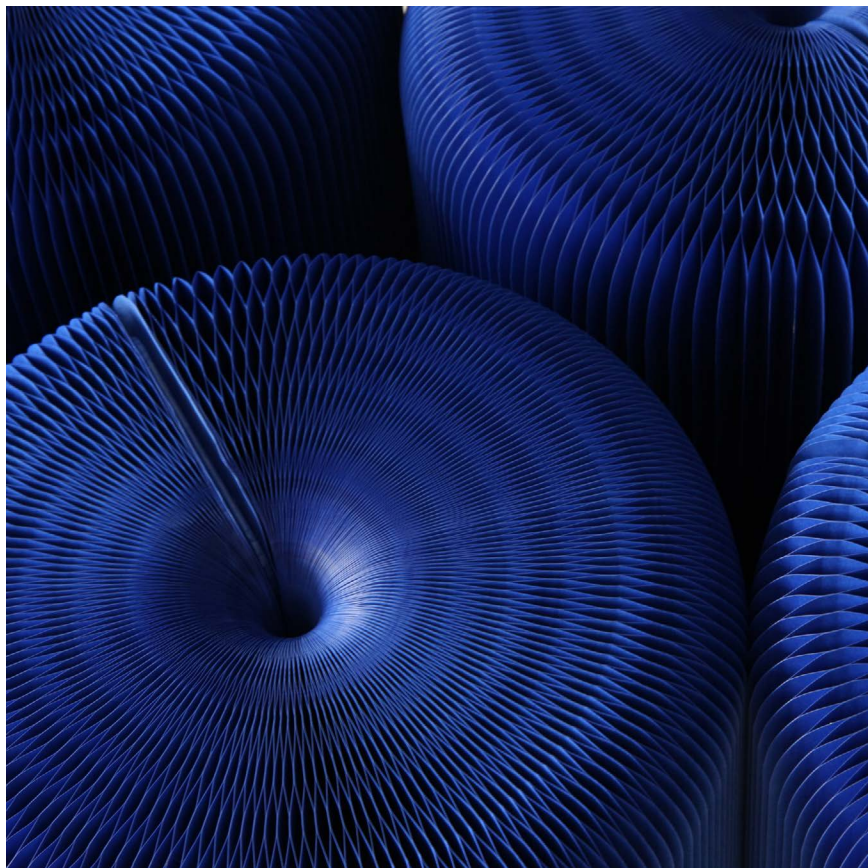

softseating is compressed for shipping and can be stored like a book on a shelf...then expanded to form a simple stool or any seating configuration you can imagine.

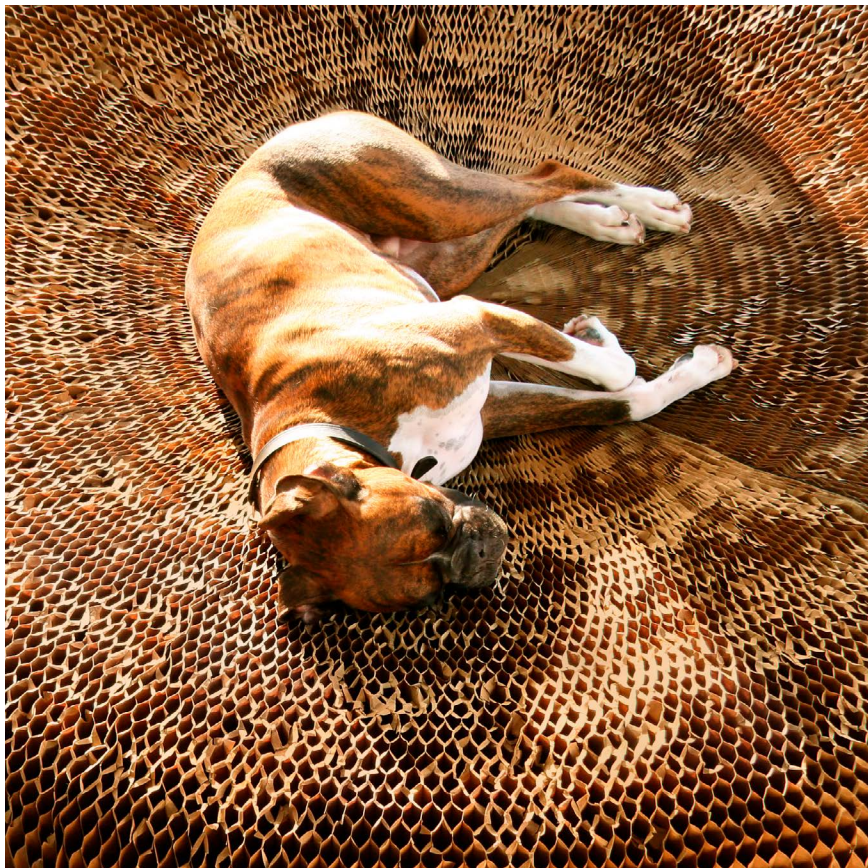

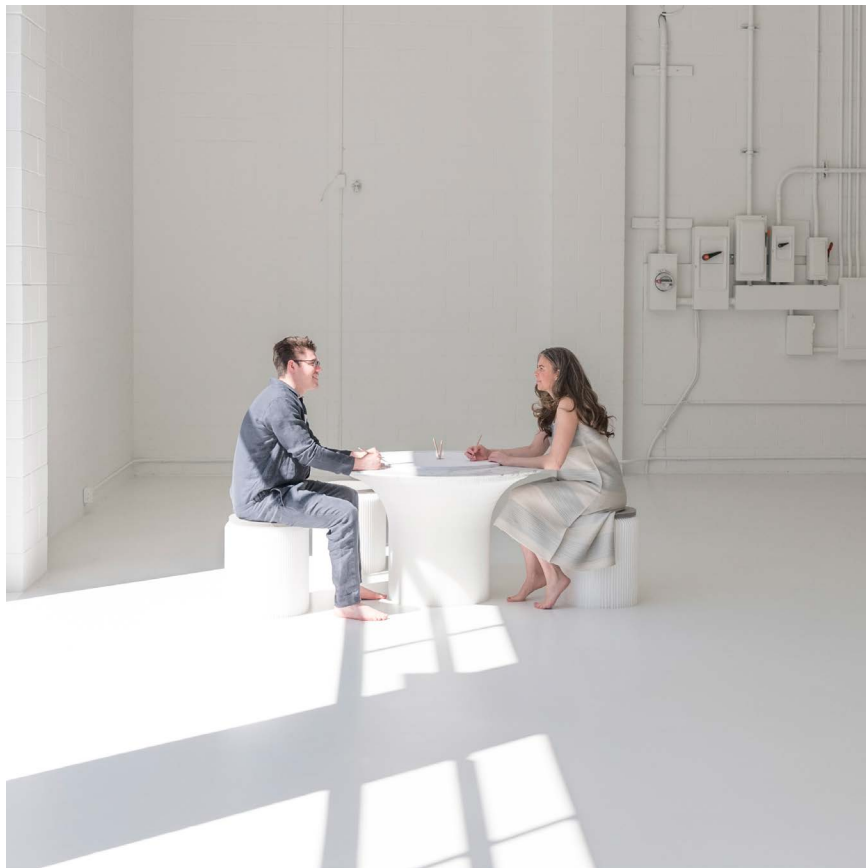

with time and use, the top surface softens and folds into a unique, organic pattern. The crushed facets catch light in a beautiful, variegated way, while the honeycomb geometry of the structure below remains strong and intact.

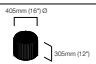

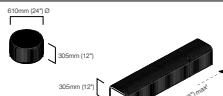

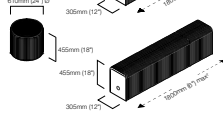

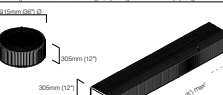

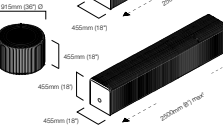

kraft paper is made from a highly robust blend of new and recycled fibre. The textile is a durable, non-woven polyethylene that is resistant to tears, UV and water. Both materials are 100% recyclable.

fanning stools pair perfectly with molo's cantilever table.
