softwall + softblock modular system

store compressed softwall on steel hook provided

15' (4.5m) max length when fully expanded from
1.75" (4.5cm) compressed form

optional wool felt handle

softwall + softblock is a modular system of flexible space partitions. Elements are made from paper—a blend of new and recycled fibres—or a non-woven polyethylene textile and come in various heights and colours. softwall + softblock are connectable by concealed magnetic end panels; making it possible to create endless lengths of walls, or stack and link blocks to shape entire environments.

Opening softwall + softblock is a playful, engaging experience. The honeycomb geometry expands to create a freestanding structure that is over one hundred times longer than its compressed form. The system's flexibility is pragmatic for compact portability, and spontaneous reshaping of living and working environments. Any softwall or softblock element can expand to a maximum of 4.5 meters, or to shorter lengths to suit particular occasions. The elements compress for storage, and a stainless steel wall hook is provided for hanging softwall.
Recognized for elegant innovation, softwall + softblock is part of the permanent collection of the Museum of Modern Art.
Design by Stephanie Forsythe + Todd MacAllen
the final layer of softwall + softblock is a magnetic panel that folds on itself for stability, connects multiple walls and blocks to one another, or anchors the elements to ferrous surfaces.

black textile softwall has an opaque sheen reminiscent of charred wood.

white textile comes to life when light shines through its delicate pattern of translucent fibres.

the internal honeycomb and pleated fins break up reflected sound to provide acoustic absorption and enhance clarity of speech.
flexible building blocks, each softblock can be stretched to 4.5m (15') long and stacked to create tall, richly textured walls.

softwalls flat pack for portability and storage, and can expand to over a hundred times their compressed form.

for ease of handling, felt handles can be attached to the ends of softwalls that are opened and closed frequently.
custom cuts can act as both practical display and sculptural form, revealing the airy structure of the internal honeycomb.

softwall + softblock comes to life when illuminated from within by LED, emphasizing the visually delicate fibres and airy structure.

white textile softblock with optional integrated LED.

the white textile material is used for other luminaries in the soft collection, allowing immersive environments to be created.
