in Europe

OEM screen manufacturer

Any size

Any colour or finish

Any specification

Bespoke manufacture

Free advice

Short lead times

Value engineering

Pan European distribution
from the UK and Italy

Worldwide distribution

Project management
and installations

Screen Solutions is not just about the end product but, more importantly, providing the appropriate solution to organising space.

Our comprehensive product range has evolved in response to market demands and each range has been designed with specific features to meet practical, functional, visual and economic requirements.

The entire process from assessment through to design, from manufacture through to installation is controlled in-house. As such, we are able to offer a unique, fluid approach by being able to ensure quality and respond quickly to new requirements as they arise throughout a project.

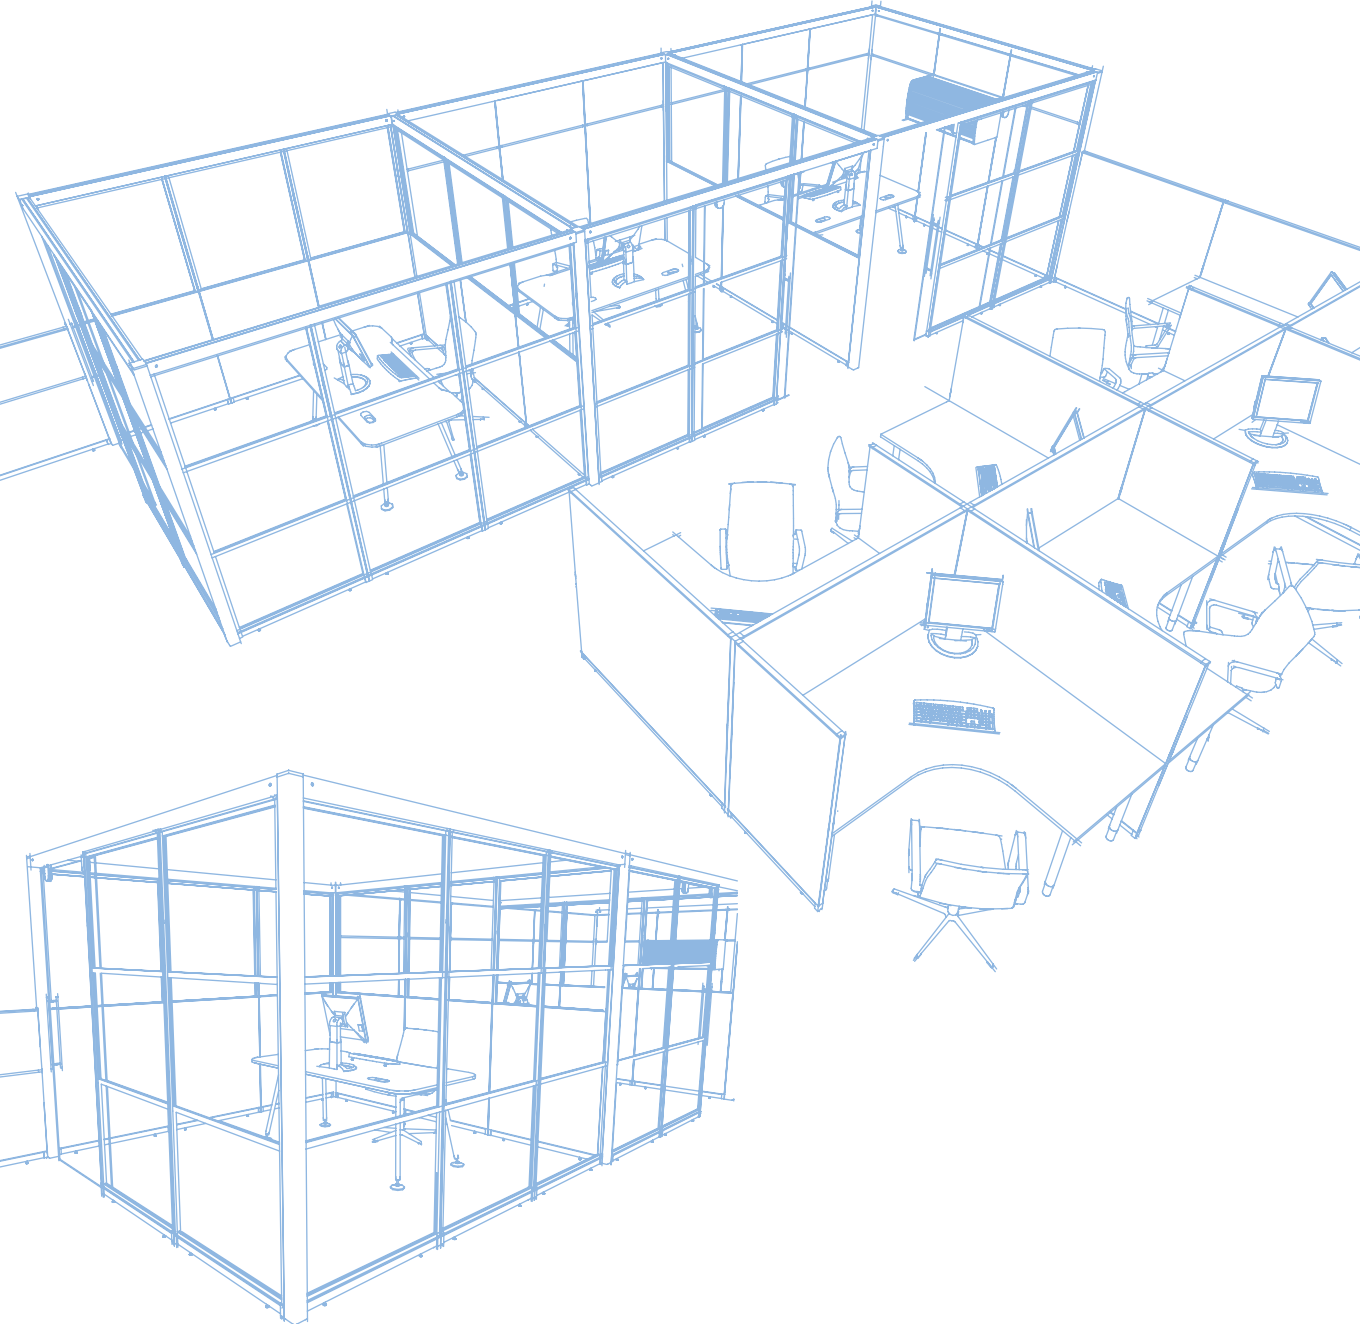

Established in 1993 and based just outside Brighton on the south coast of the UK, Screen Solutions is the largest independent screen manufacturer in Europe.

Our product portfolio spans a wide spectrum of screen systems – from total workspace solutions which provide completely independent free-standing offices, break-out and reception areas to individual workstations. We can provide intelligent screen systems that support high capacity cable management for today's I.T. and communications environments, to which third level storage and accessories can be added. This helps reduce the workstation footprint and saves valuable floor space.

At the other end of the scale, we also manufacture relatively simple, free-standing and desk-mounted screens for dividing space. These provide ergonomic workstations and help organise space.

Our products are designed and built to be versatile and develop with your needs. They are easy to install and re-configure. Additional stacking height extension panels can be fitted at a later date along with a wide range of accessories offering increased functionality.

72%

of workers are dissatisfied
with their speech privacy

UNIVERSITY OF CALIFORNIA
AT BERKELEY STUDY

Before

Levels of speech privacy in the building before noise management is employed. Results show that areas where conversations are intelligible to listeners (pink) cover a large area of the office.

After

Levels of speech privacy in the building with integrated noise management. Areas where speech is intelligible are reduced to a small radius around the immediate source. This means greatly increased privacy for the persons conversation.
