# Welcome to the World of Healthy Sitting

## SALLI IS POSSIBLY THE WORLD'S HEALTHIEST CHAIR

Studies indicate that we sit in average up to 14 hours a day. Most experts agree that the human body is designed for versatile movement and that sitting static for longer periods of time is not optimal. Excessive sitting is linked to well-documented muscular- and skeletal disorders, especially in the shoulders, neck and back. The philosophy behind the Salli concept is that the natural posture of the human body is transferred to sitting. Traditional sitting with 90-110° in the hip and knee creates an imbalance. In this position, the muscles in the lower back and neck need to constantly compensate for the imbalance, which is tiring. The traditional backrest is designed, so that we are able to sit in imbalance for longer periods of time by delaying the fatigue and pain. When we are standing upright we need no external backsupport, because we are in perfect balance and supported by the skeleton. The secret of the Salli chair is that it allows us to sit in perfect balance effortlessly, just as in standing. Brilliant? Yes!

**“...allows you to sit in perfect balance effortlessly...”**

### ADVANTAGES WITH SALLI

- IMPROVED POSTURE IN
  - ✓ HIP AND KNEES
  - ✓ THE BACK
  - ✓ NECK AND SHOULDERS
- IMPROVED BREATHING
- IMPROVED DIGESTION
- IMPROVED STRESS RESPONSE
- IMPROVED CIRCULATION
- IMPROVED BALANCE & STRENGTH
- IMPROVED GENITAL HEALTH

### NEUTRAL POSTURE

Working healthy means working close to the natural posture. For example slight crouching of the back will obstruct the arteries and veins that supply nutrients and remove waste products from muscles and joints. This is the most common cause of discomfort and pain. The natural posture is illustrated well by the swimmer. Under water the body is only affected by a minimum of external stimuli and it will always obtain a perfect neutral posture. Do you notice that the posture is identical to the posture you have on the Salli chair? This is why Salli is possibly the healthiest chair in the world.

### CUSTOMER FEEDBACK

It is likely that because of the many health advantages of a Salli chair that this will be the preferred way of sitting in the future. Many have already become aware of the health benefits and have acquired a Salli chair. And yes, it does feel strange, hard and uncomfortable in the beginning. Especially an uncomfortable feeling on the sitting bones under the hip is normal the first weeks. However, the nerves adapt to this new stimuli very fast and then you can start enjoy all the advantages of healthy sitting. Feedback from customers all over the world can be found on [salli.com](http://salli.com).

### Salli Twin Seat Technology

A Salli chair is easy to recognize as it is the only chair with divided seat in the world. The divided seat is patented worldwide. The benefit of a divided seat is that it allows you to tilt the pelvic forward to its natural position. The seat is also designed to avoid any unnecessary pressure in the soft tissues in the hip, thigh and genital area. The pressure is cleverly directed to the sitting bones (ischial tuber.) which is the base for the vertebral column and the upper body.

### Salli Swing Technology

Salli swing technology allows the hip and lumbar spine to move in a natural and dynamic way. This movement keeps the circulation in muscles and joints in good shape. A Salli chair has the movable joint close to the hip. This feels very comfortable and allows a 360° natural and dynamic swing motion in the hip.
